

SUCCULENT

Xerophyte

SOIL: Miracle-Gro Cactus, Palm and Citrus Potting Mix

WATER: Water soil thoroughly (replicating a desert flood) when the soil has been completely dry for several days.

LIGHT: Direct sunlight about 6 hours a day. If sunlight coming through your window is too harsh, or the temperature outside is too hot, succulent leaves may burn. In this case, cover with a shade cloth or relocate your plant.

CARE: Expose to outside air and extra sun in the summer.
